

For Immediate Release

Quick Cable® Launches New RESCUE™ Battery Containment Systems, Racks and Cabling Systems

New Products Provide Storage & Connectivity Solutions for Stationary Power Applications

March 8, 2010 (Franksville, WI) – Quick Cable Corporation, a leading manufacturer of products for electrical storage and connectivity, announces the release of RESCUE™ Battery Containment Systems, Battery Racks and Cabling Systems in conjunction with the release of the new Stationary Power catalog.

Designed to comply with the Uniform Fire Code (UFC), OSHA and EPA regulations, Rescue™ Battery Containment Systems integrate superior engineering with industrial strength materials to offer the highest level of protection for stationary lead acid battery systems.

Available in PVC or stainless steel, Rescue™ Battery Containment Systems are complete turnkey systems that include PVC liner, absorbent pillows and socks, rails, corners and clips. Designing a battery containment system evolved into a twelve-month project involving Quick Cable engineers, management and sales staff as well as input from Quick Cable customers.

In addition to new containment systems, Quick Cable is introducing Battery Racks and Cable Kits to be used in conjunction with Rescue™ Containment Systems. The new modular Battery Racks are made with sturdy steel construction, are powder coated and come in two models. One model has two fixed shelves, and another has one fixed and one roll-out shelf, making it easier to install and maintain batteries. Complete cable kits are available with or without disconnect hardware.

As a basic manufacturer, Quick Cable can specify, quote and ship battery racks, cable kits and containment systems within 24-hours, the fastest turnaround in the industry.

To see the new Stationary Power Catalog, visit www.quickcable.com. In addition, Quick Cable has produced new product videos which feature detailed installation instructions. Videos are available 24/7 at www.quickhowto.com.

Quick Cable Corporation, a leading manufacturer of products for electrical storage and connectivity, is headquartered in Franksville, Wisconsin, with manufacturing plants in Franksville and Mississauga, Ontario. As part of its involvement with the power industry, Quick Cable is a member of the Solar Electric Power Association (SEPA), Electrical Generating Systems Association (EGSA), and is an ISO registered company.
